Youngstown

EVERY housewife is an experienced "Kitchen Traveler". If she travels in an old style kitchen her "cook's tour" will average 125 miles a year; if she travels in a modern kitchen, she will cover about 30 miles—a saving of 95 miles a year! Here is "food for thought".

This tremendous saving in mileage and energy has been brought about by careful, scientific analysis of the work done near the stove, sink, and refrigerator and, then, that work has been so planned that it can be done with the fewest possible steps. The keynote of the modern kitchen is, a place for everything where it can be used most conveniently.

Kitchen-testing has proven that the most successful kitchens are those that have been planned most carefully—and the A B C of successful planning is, **A**rrange for **B**eauty and **C**onvenience.

The Youngstown All-Steel Kitchens are scientifically designed, made entirely of steel—the most modern material for kitchen equipment, with beautifully styled accessories, and in a wide range of sizes which makes them easily adapted to any sized kitchen.

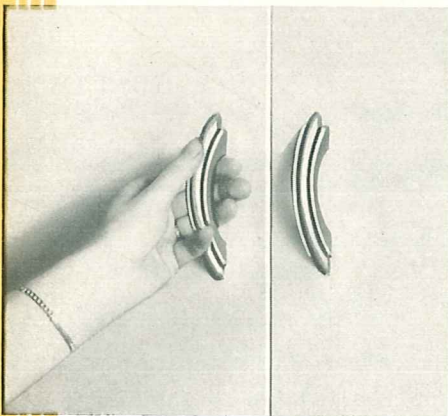

Every Youngstown sink and cabinet carries the Good Housekeeping seal of approval.

Youngstown

1

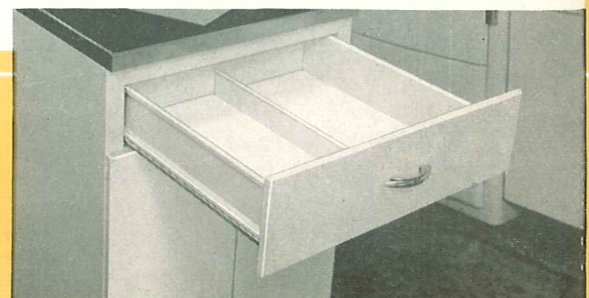

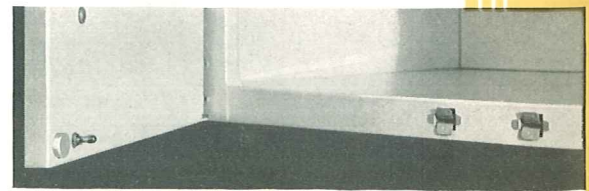

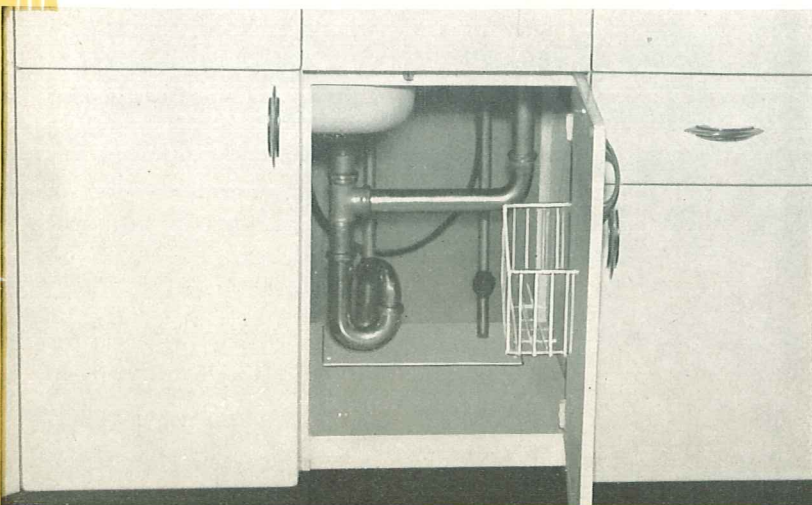

1. The base, 4" high, set back from lower edge of cabinet 4", gives ample toe space. The recessed front of cabinet, a patented feature, provides comfortable knee room.
2. The attractive, conveniently placed chrome handles are an exclusive design used only on Youngstown kitchen units.
3. Continuous drain used with the double bowl 66" Twin-sink, 48" Double Duty and Double Service.
4. Patented door catches which really catch.
5. All cabinet drawers are fitted with *brass runners* for smooth, quiet operation.
6. The broom closet will easily store an electric sweeper, brooms, and other cleaning equipment.
7. The Crumcup does away with the old fashioned dish pan.

2

3

4

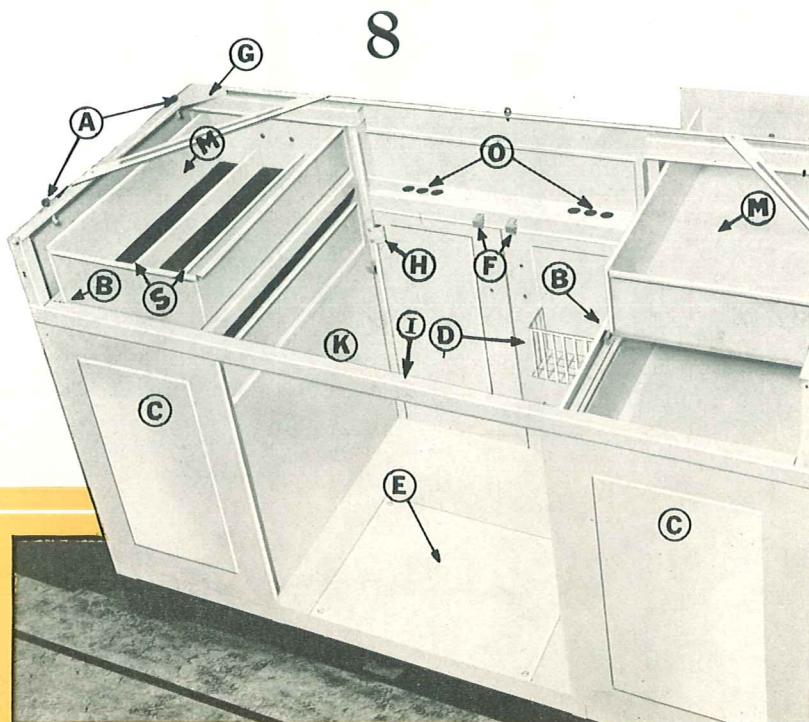

5

construction FEATURES

8.

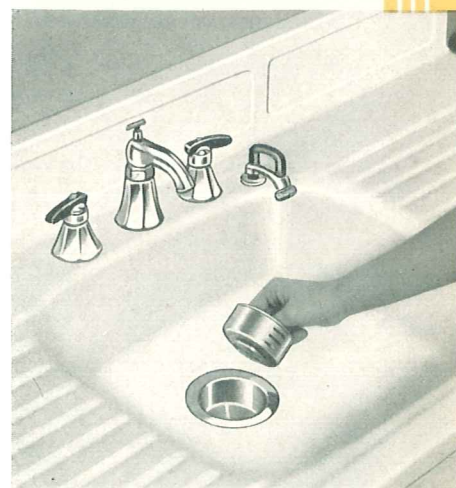

- A—Adjustable mounting cushions for sink tops.
- B—Brass runners for quiet operation and long wear.
- C—Solid back wall keeps inside of cabinet free from dust.
- D—Container for soap powder, polishes, etc.
- E—Removable plate, covering openings for pipes.
- F—Patented door catches which really catch.
- G—Reinforced corners.
- H—Concealed hinges — strong and silent.
- I—One piece angle bar for reinforcing—welded in place.
- K—Steel partition for strengthening cabinet.
- M—Steel cross braces for extra strength.
- O—Ventilators — instead of dust catching louvres.
- S—Bottom of cutlery drawer is lined with best quality, extra heavy linoleum. This protects both cutlery and drawer and eliminates the noise caused by metal shifting against metal when the drawer is opened and closed.

on every unit.

Youngstown INSTALLATIONS

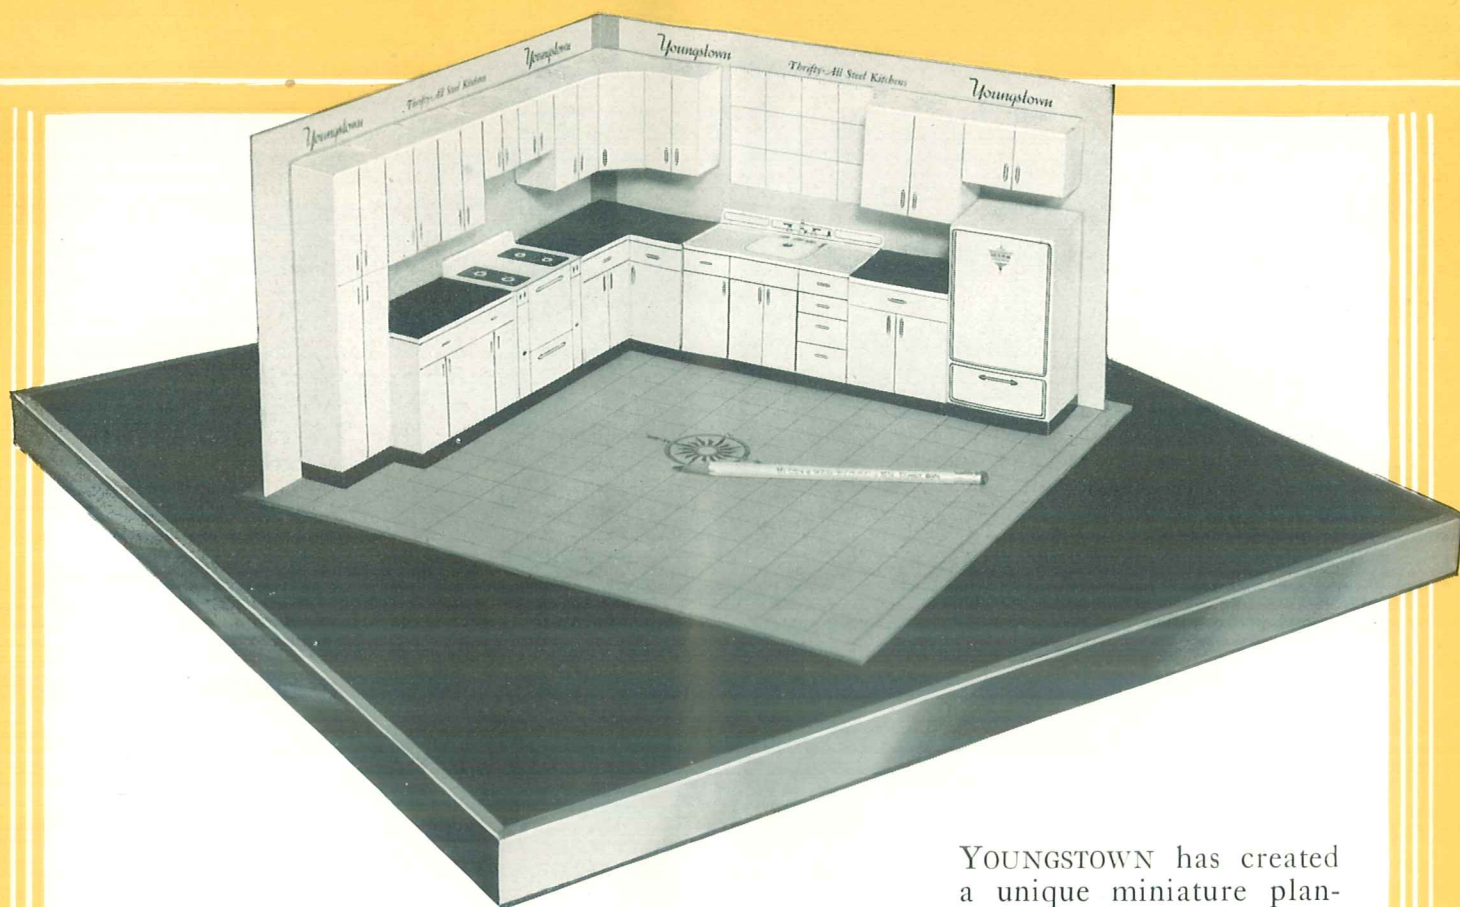

These Youngstown kitchens have been installed in homes where home makers figure comparative values. They have found that these complete kitchens cost *only slightly more than a good family size refrigerator.*

Youngstown All-Steel Kitchens Arranged for Beauty and Convenience.

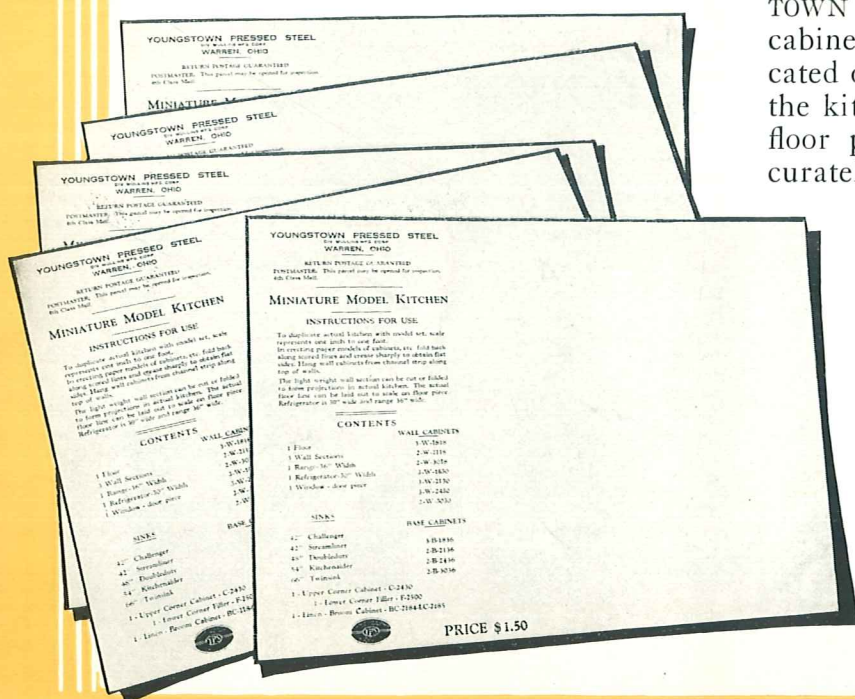

KITCHEN PLANNING MINIATURE

YOUNGSTOWN has created a unique miniature planning kit. In this kit every size of YOUNGSTOWN kitchen equipment—cabinet sinks, wall cabinets and base cabinets—has been duplicated on a scale of $1'' = 1'$. Also included in the kit are range, refrigerator, and wall and floor pieces so that any kitchen can be accurately reproduced.

After the floor and wall plan has been made up, then sink, refrigerator and range are put into the desired locations and, in the remaining space, base and wall cabinets are arranged to suit the needs of the prospective buyer.

The beauty of this miniature kitchen is that it not only gives the buyer a concrete idea of what the kitchen will look like, but it allows re-arrangement of cabinets until the best possible arrangement has been found.

Youngstown

Youngstown

NON-MEC

P-668 Twinsink

See Page 10
for further details.

The Twinsink Model is not only popular for use in large kitchens, but for a small kitchen it gives maximum storage and work space in a minimum of floor space. The double bowl, double drainboard feature makes this the ideal dishwasher. The Twinsink is 66" long and has 27½ cu. ft. of storage space. The cutting board is removable. The ledge mounted mixing faucet with swing spout and spray are of finest quality brass, chromium finish.

The sink top is finished in acid-resisting porcelain enamel. The undersink cabinet is finished in high gloss Hi-Bake enamel baked onto the steel.

Look for this label
on every unit.

The Kitchenaider Model is a "best seller" because it has all the refinements of the Youngstown line except the double bowl. It is 54" long—only 12" shorter than the Twinsink shown above.

The sink top is finished in acid-resisting porcelain enamel. The undersink cabinet is finished in high gloss Hi-Bake enamel baked onto the steel.

Five drawers and a large compartment give 22½ cu. ft. of storage space. There are also a cutting board and sliding shelf. It has the same fittings as the Twinsink.

The Crumcup strainer can, by a half turn, be adjusted to convert the bowl into a dishwasher.

P-548 Kitchenaider

MCHANICAL DISHWASHERS

The Double Duty Model is specially suited for apartments or small homes where kitchen laundry facilities are an advantage or where there is an unusual amount of dishwashing. A cutlery drawer and three roomy compartments give 20 cu. ft. of storage space.

The fittings and finish of this sink are the same as on all Youngstown cabinet sinks.

The tray slides from side to side or it may be removed entirely.

P-488 Double Duty

P-748 Double Service

See Page 10
for further details.

The Double Service Model is the same size and has the same capacity and finish as the Double Duty, but the undersink cabinet has only one large compartment.

Youngstown CABINET SINKS

PR-428 STREAMLINER

The new 42" Streamliner is the finest and most compact unit for kitchens not large enough to accommodate a double drainboard cabinet sink. It is furnished with either left or right hand drainboard (as you face unit). Four spacious drawers and a large compartment are provided in the undersink cabinet. The sink top is finished in acid-resisting porcelain enamel.

PL-419 CHALLENGER

The 42" Challenger is an ideal sink for anyone wanting an inexpensive installation. It has the same construction and finish as the other models but does not have the drawer space. The undersink cabinet is divided into two large compartments; the compartment under the drainboard has a shelf through the middle. It is furnished with either right or left hand drainboard (as you face unit).

Removable pastry board, sliding shelf for electric mixer, and rubber-covered dish basket.															

Handles and sub-bases of cabinet sinks are attached at factory to insure absolute uniformity in installation.

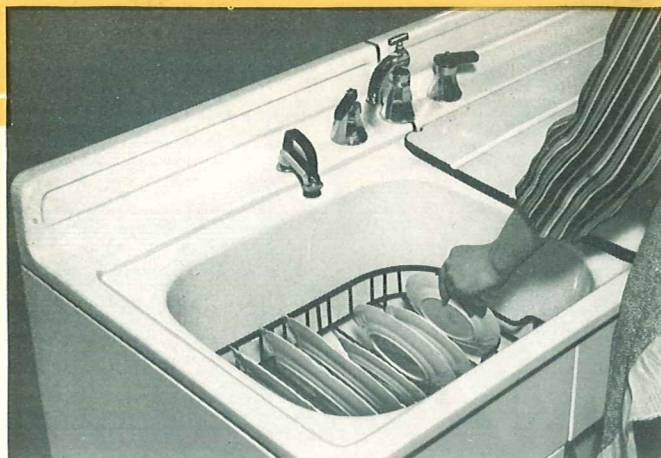

FLAT RIM SINKS

Width	Length	Bowl Depth
18"	24"	6 - 11/32"
18"	30"	6 1/2"
19 3/4"	34 1/2"	7 - 11/32"

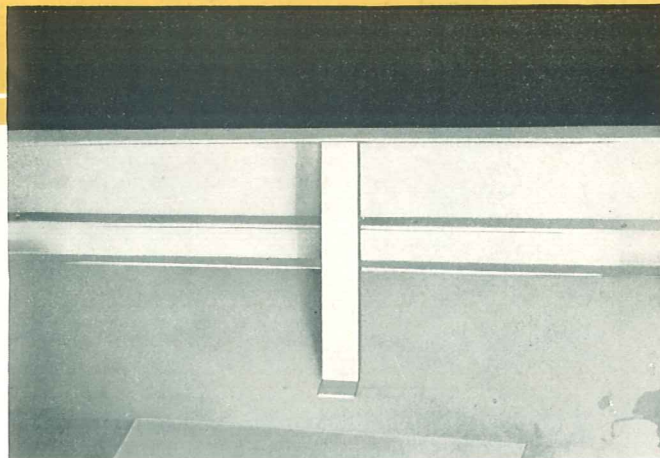

These sinks designed for building in Linoleum Top Drainboards. Slotted edges facilitate installation.

Youngstown *extra value* FEATURES

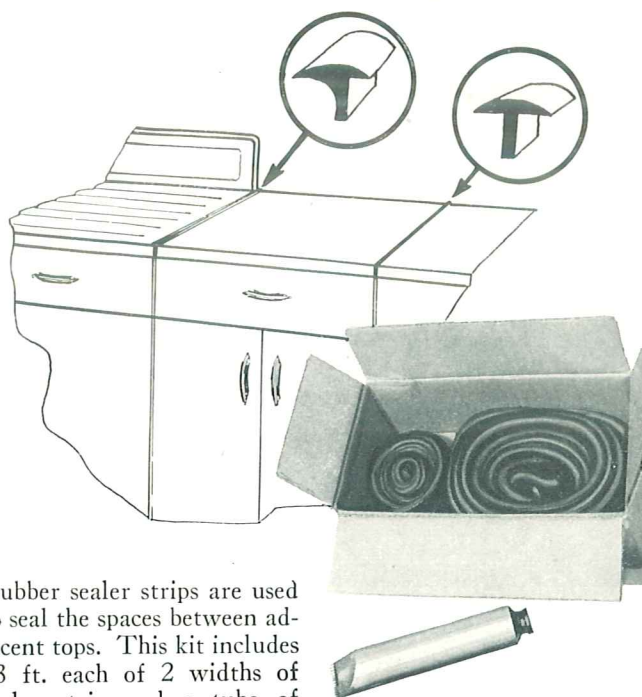

In the 48" Double Duty and Double Service cabinet sinks, the left hand bowl is 11½" deep. This allows dishes to be rinsed with water hot enough to sterilize them and then to dry without wiping. They can be covered with the sliding tray to protect them from dust.

The base cabinets have a center brace to give them extra strength and straightness.

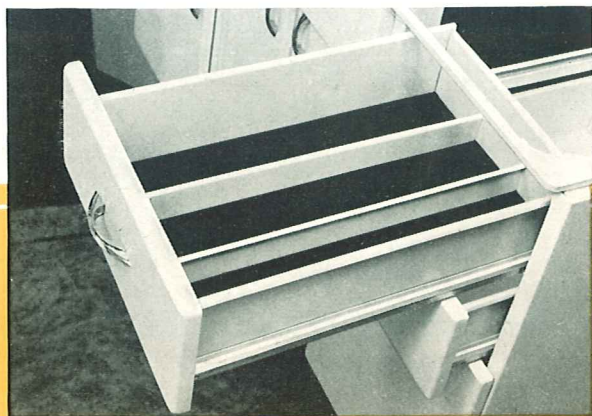

All drawer heads are 7/8" thick and fully insulated.

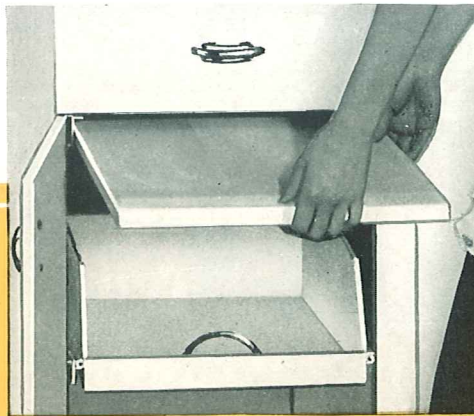

Rubber sealer strips are used to seal the spaces between adjacent tops. This kit includes 13 ft. each of 2 widths of sealer strip and a tube of special cement.

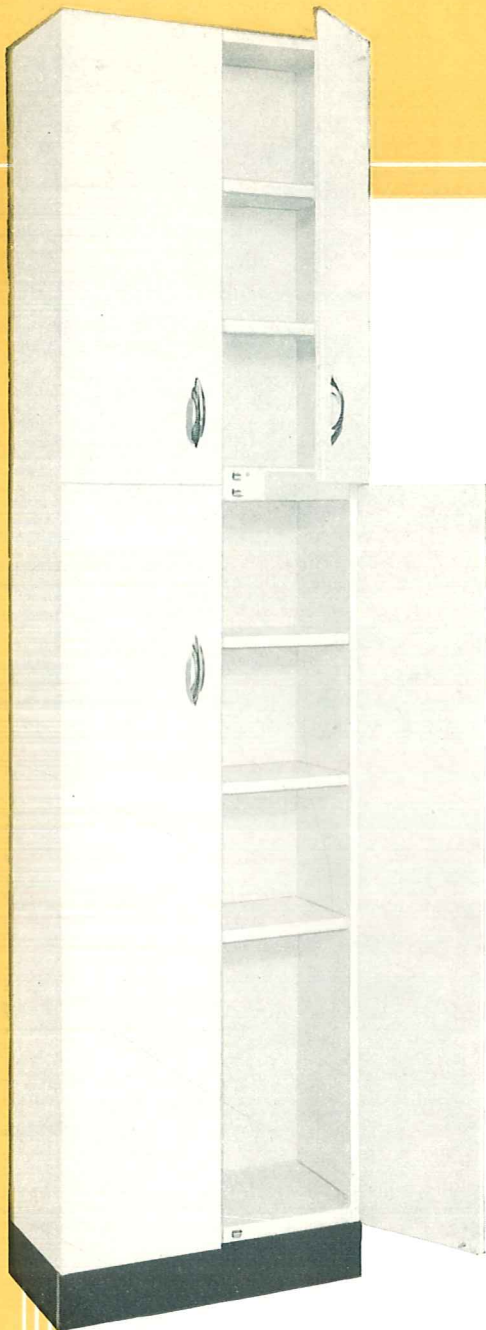

The cutlery drawers are lined with the best grade extra heavy black linoleum.

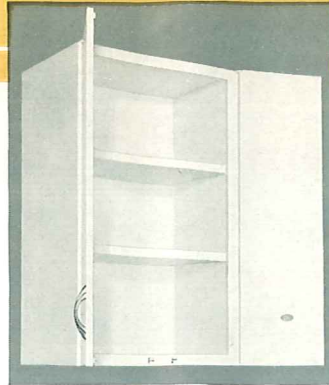

The cutting board is removable. If drawn part way out of its compartment, it is a strong base for food grinders. The sliding shelf is ideal for storing electric mixer.

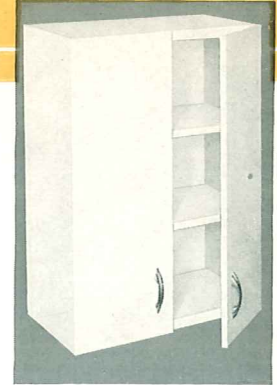

Youngstown CABINETS

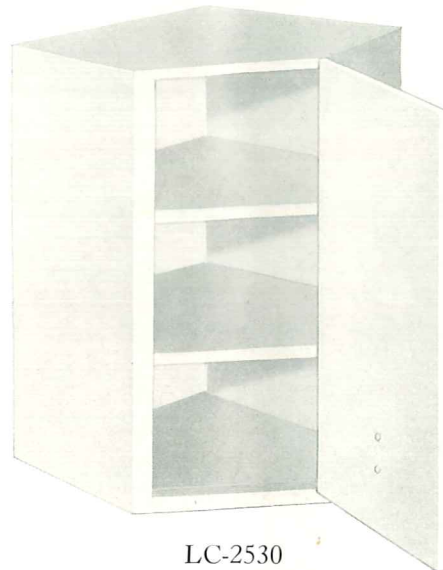

LL-2185

LW-1830

LW-2130

LC-2530

The Youngstown Luxury line of Wall Cabinets is shown on this and the facing page.

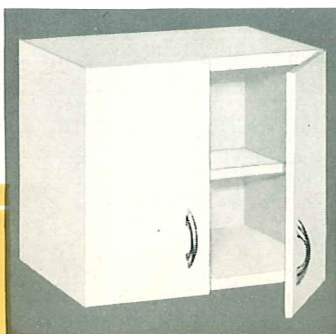

The DeLuxe line varies from the Luxury line in that the DW-1818 and the DW-1830 models have one door instead of two; the DW-1818, DW-2118, and the DW-3018 do not have the center shelf.

The Luxury line has a recessed back; the DeLuxe line a flush back.

for KITCHEN ENSEMBLES

LW-2430

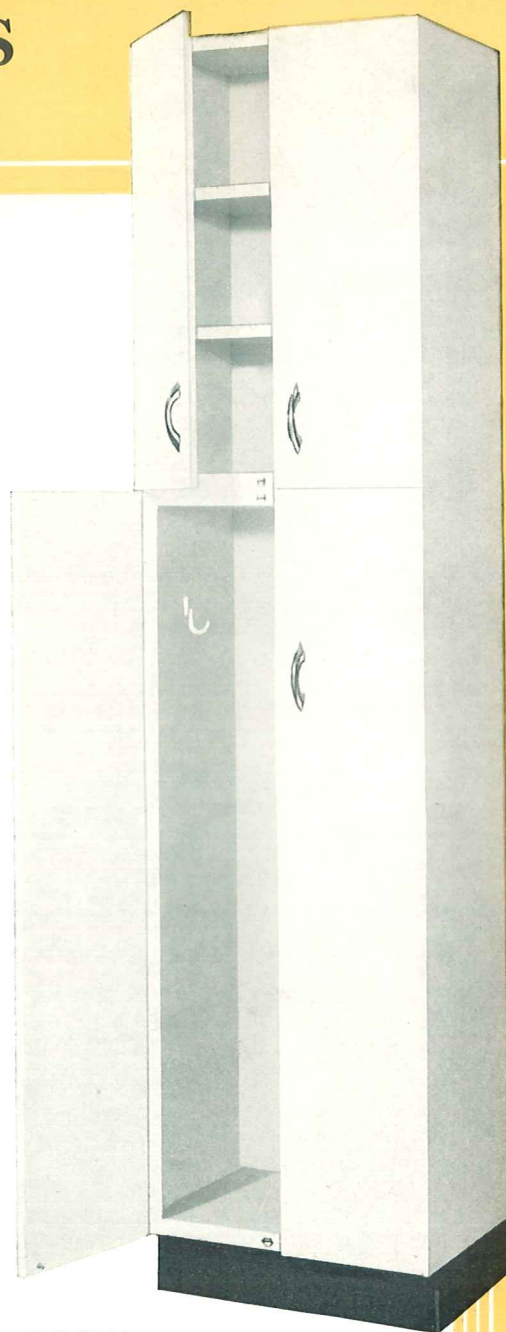

LW-3030

All Youngstown cabinets are finished with two coats of high gloss, Hi-Bake enamel baked onto specially rolled steel. The exclusively designed chromium handles are the same as those used on the undersink cabinets. This gives a uniformity to the appearance of the kitchen which can not be had when cabinets are bought from different manufacturers.

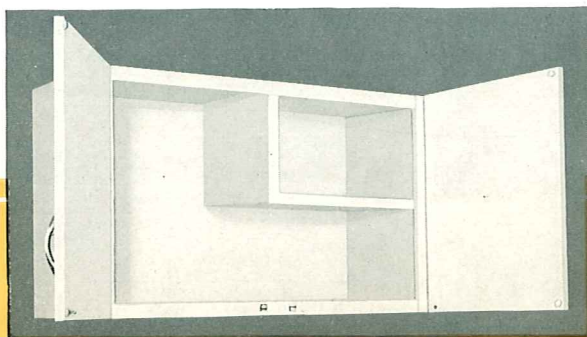

The doors are fitted with rubber discs to make closing noiseless. The semi-concealed hinges operate smoothly and quietly. They add much to the appearance of the cabinet and make cleaning easier.

See Page 15
for further details.

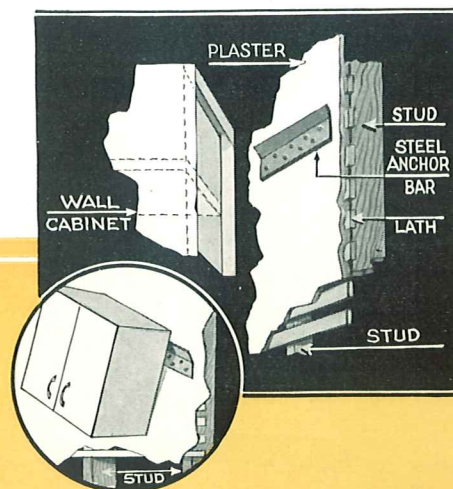

The Luxury line—with recessed back—is installed as shown in the illustration at right. Steel anchor bar is furnished with the cabinet.

LB-2184

LW-3018

Youngstown BASE CABINETS

YOUNGSTOWN all steel Base Cabinets come in sizes as shown below. They are made of the same materials used in modern refrigerators and ranges — Hi-Bake enamel baked onto specially rolled steel.

All drawer heads and door heads are fully insulated to insure quiet operation.

All drawers are made with brass runners for smooth riding and long life.

The pulls are of chromium in an exclusive YOUNGSTOWN design.

Doors, flush — semi-concealed hinges.

All base cabinet tops are linoleum mounted (by cement) on a steel sub-top bound with stainless steel moulding. Unit tops are supplied unless otherwise specified. Continuous tops with or without 4" splash back will be quoted on request. Cabinets can be furnished without tops.

All base cabinets have a sub-base set back 4" to allow comfortable toe room.

Base cabinets are used with either the Luxury or DeLuxe wall cabinets.

Dishwashing and
Cleaning Center

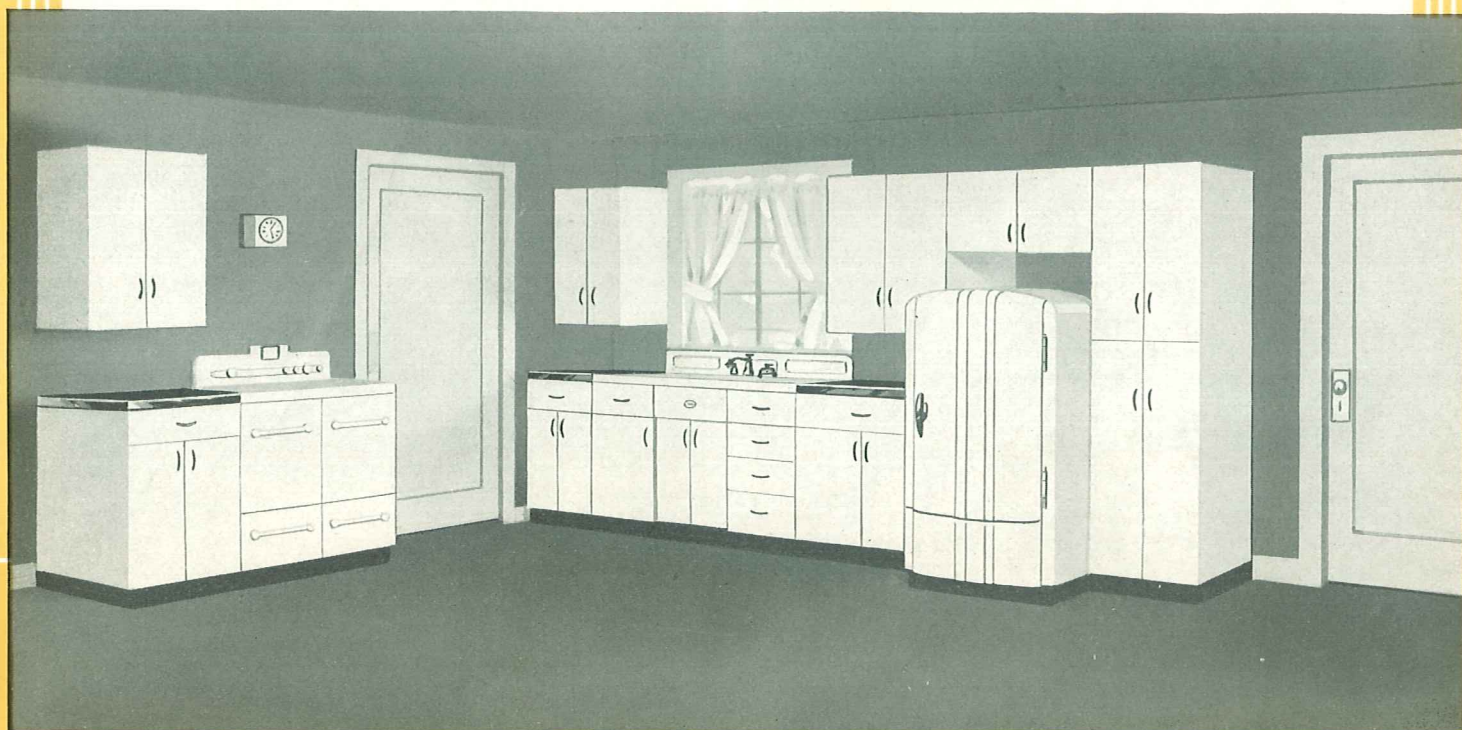

GOOD KITCHEN DESIGN

ON page 4, the three essential units of the kitchen—stove, refrigerator, and sink — are shown flanked by cabinets to make them efficient work centers. When these work centers are properly arranged, the result is a step-saving kitchen. The kitchen-tested arrangement is Storage and Preparation Center near the outside entrance door, Cooking and Serving Center near the dining room entrance, and the

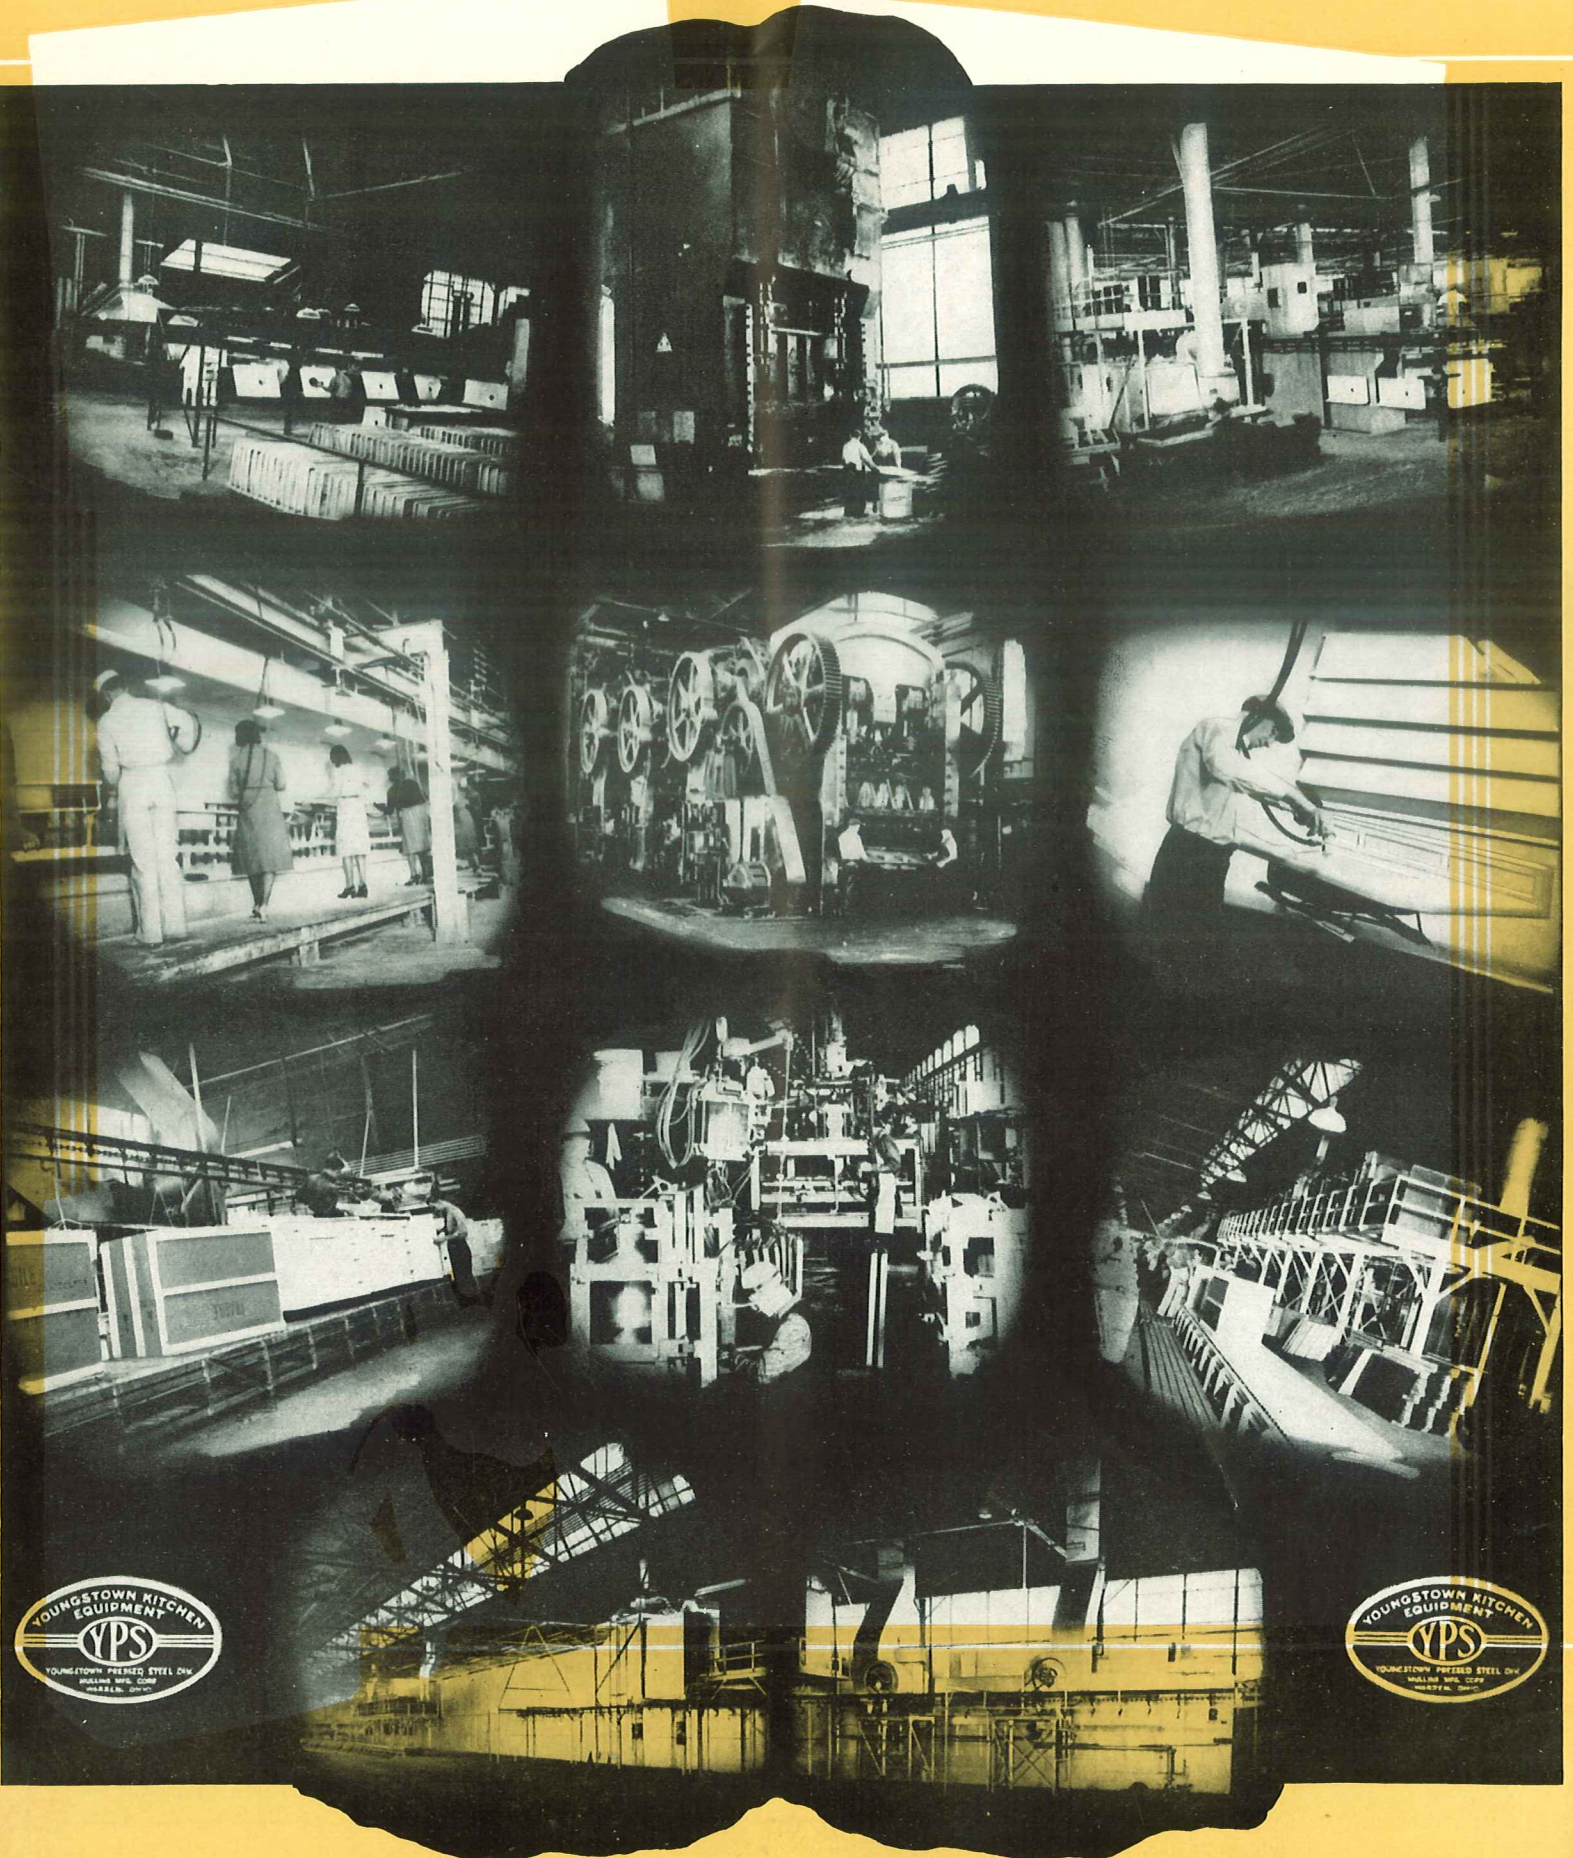

Dishwashing and Cleaning Center between the two.

The work centers shown on the opposite page have been assembled into the efficiently arranged kitchen shown below.

With a Youngstown All-Steel Kitchen, the complete transformation from an old style kitchen to a beautiful modern one can be accomplished quickly, *usually for not more than the cost of a good refrigerator.*

YOUNGSTOWN KITCHENS *in the Making*

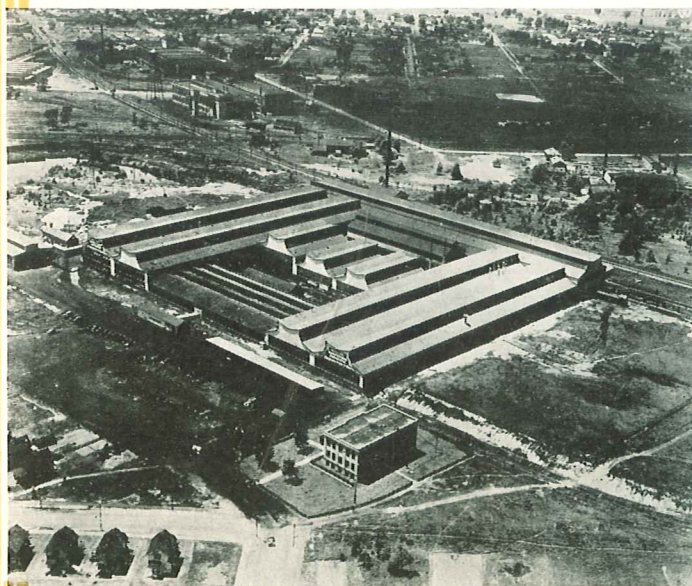

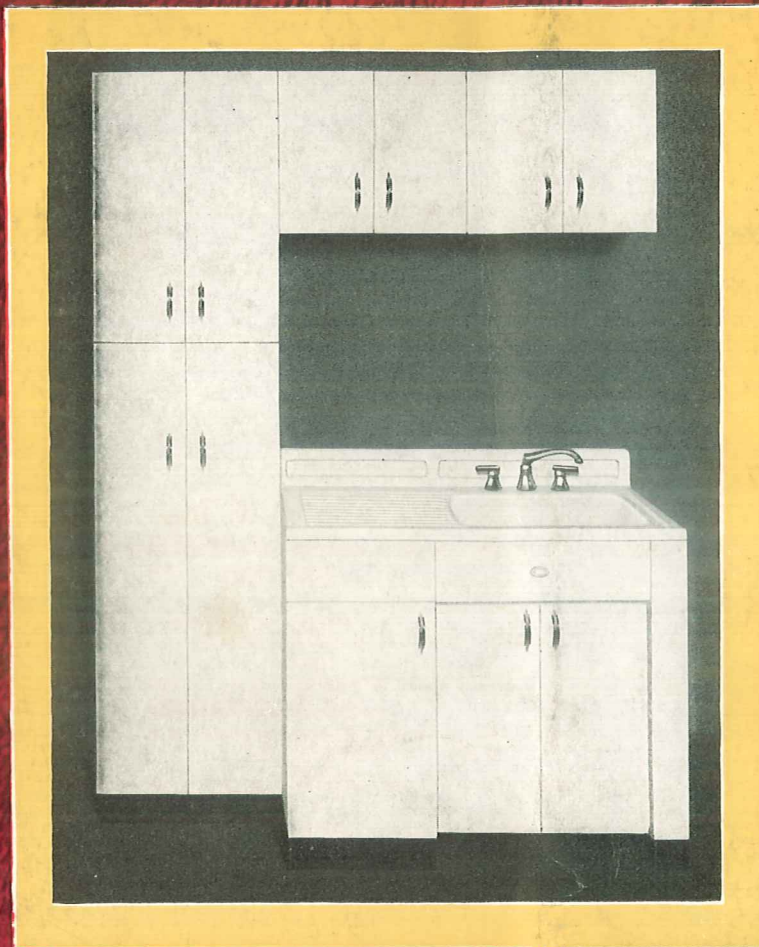

The PLANT BEHIND *the* PRODUCT

*W*HAT mass production has done for the automobile in obtaining the greatest dollar value for the customer, YOUNGSTOWN PRESSED STEEL, with its new straight line production methods and conveyor system, its steel fabrication, welding, vitreous and baked enamel furnaces, is doing for the kitchen.

Youngstown is the only self-contained manufacturer of complete sink and cabinet equipment—thus insuring in our ALL-STEEL KITCHEN symmetry in lines and hardware, harmony in color and design, and complete shipment from one factory—centrally located.

YOUNGSTOWN PRESSED STEEL, (a division of the Mullins Manufacturing Corporation, operating three separate plants at Salem, Ohio, and one at Warren, Ohio), has for years been recognized as a quality manufacturer of enamel ware. Its reputation and outstanding facilities are your guarantee of quality merchandise.
